

ISO TC67/WG2 has updated ISO/TS 29010:2010 to a full International Standard in line with ISO 9001:2015 providing organizations with an opportunity to standardize the implementation of quality management and conformity assessment processes, across the Oil and Gas sector, with the aim of managing supply chain risks to support the realization and protection of asset value during their development and operation lifecycle.

Outline :

- Highlights of ISO 29001:2020
- Applicability and Benefits of the Standard
- Current international adoptions and translations status
- Updates on upcoming developments - eg. ISO 29010, ISO 29011, ISO 29012, etc.

Recommended for :

- Managers and Engineers supporting the Oil & Gas Sector
- Quality Management professionals / Auditors
- Personnel responsible or involved in the specifying of vendor quality/ supply chain requirements

CPD : 1 PDU approved by The Professional Engineers Board Singapore

The event is open to all. Interested attendees may [register online](#) .
